

What is PDA?

Progressive Democrats of America was founded in 2004 to transform the Democratic Party and our country. We seek to build a party and government controlled by citizens, not corporate elites—with policies that serve the broad public interest, not just private interests. As a grassroots PAC operating inside the Democratic Party, and outside in movements for peace and justice, PDA played a key role in the stunning electoral victories of November 2006 and 2008. In 2014, we were the first national organization to endorse Bernie Sanders, and our seminal **Run Bernie Run** and subsequent **We Want Bernie** campaigns helped bring progressive ideals to the mainstream in American politics. In 2018 we endorsed and worked for progressive candidates whose victories will shape the face of Congress going forward.

Our inside/outside strategy is guided by the belief that a lasting majority will require a revitalized Democratic Party built on firm progressive principles.

For over two decades, the party declined as its leadership listened more to the voices of corporations than those of Americans. PDA strives to rebuild the Democratic Party from the bottom up—from every congressional district to the corridors of power in Washington, where we work arm in arm with the Congressional Progressive Caucus.

Houston, We Have a **Climate Emergency**

The National Aeronautics and Space Administration (NASA) began in 1958, charged to employ peaceful applications in space science. Scientists and engineers at the center at Houston, TX, oversaw early missions, where the phrase, “Houston, we have a problem” entered the popular lexicon.

The new **Intergovernmental Panel on Climate Change** (IPCC) report on the trajectory and effects of global climate change, strongly influenced by human activities, presents dire scenarios of increasingly extreme weather, sharp decreases in land productivity, rapidly rising sea levels, and climate-related migration, strife, and genocide.

Detailing a range of possibilities, the report says a rise of 2 degrees Celsius, a goal set by the **Paris Climate Accord**, will result in melting ice sheets that cause a catastrophic rise in sea levels, drowning islands and coastal cities within this century. Water shortages will affect nearly half a billion people. Droughts and heat waves will make cropland unproductive, killing millions outright and millions more by starvation. **That’s the good news**—right now we are on a path toward a 4-degree Celsius rise by the end of this century. We must act now, together, in a concerted and coordinated manner toward a **Green New Deal**, a comprehensive approach tackling climate change, income inequality, and other socio-economic barriers to sustainable prosperity. The poorest people and regions have always suffered most from environmental degradation, but we are all in this together.

PDA remains committed to combatting climate change aggressively with allies inside and outside the government.
